*Election/Restrictions*

1. Applicant traversal has been carefully considered. It is not found convincing. The determination of patentability of the pharmaceutical compositions is substantially different from the determination of patentability of the method claims. The examiner has done a preliminary search and found the compound O-desmethylvenlafaxine to be disclosed in the patent are earlier as 1985 (US4535186 A 19850813). The prosecution of the pharmaceutical composition claims and the method of use claims thus would be divergent and be a serious burden to the examiner.
2. The group elected by applicant (V) includes claims 27-59. The elected species was O-desmethylvenlafaxine. Upon further review the examiner feels that an additional election is required. Applicant is required to elect a specific disorder that is being treated with the elected species. The disorders in this group range from the treatment of pain, obesity, Parkinson, epilepsy, etc. These maladies are not recognized as being obvious over one another. Thus, Applicant is required to elect a single disclosed method, even though this requirement is traversed.

Should applicant traverse on the ground that the methods are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the methods to be obvious OR CLEARLY ADMIT ON THE RECORD THAT THIS IS THE CASE. In either instance, if the examiner

finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
